Carbon rich soil cleans our air!

Make your pledge today at www.GlobalCompostProject.org and help promote this worldwide mobilization to:

- Sort organic waste
- Make and spread compost on urban and rural soils!
- Create green jobs!
- Boost photosynthesis to clean our air!
- Reverse global warming and heal climate change!

Right now there is too much carbon in our air and too little carbon in our soil.

Fertilizer feeds plants nitrogen. Compost feeds soils carbon! Carbon rich soils clean our air!
